ruAR - Measure with style

Powered by iOS 11 and ARKit, ruAR turns your iPhone or iPad into an advanced measuring toolkit. Measure floors, walls, three-dimensional objects, room sizes, volumes and much more using ruAR's simple and straight-forward AR interface.

ruAR Features

Ruler

Take precise distance measurements using the line ruler. A virtual ruler graphic shows you the current length just like a real ruler.

2D/3D Objects

Create objects in any form and dimension, while the app shows you their length, area and volume sizes.

Save & Share

Save and share your measurements as blueprints, photos and 3D objects.

Metric & Imperial

Switch to your preferred unit system, no matter where you are.
